

3.1、 Requirement of Face Registration

Please upload a photo without hat on for the past three months. Facial features should be clearly visible. Even light, no obstruction, no obvious exaggerated expression, no excessive retouching is essential for accurate recognition. The recommended size is 100 px * 100 px and the format should be jpg or png.

3.1.1、 Qualified Example of Photos

- **Low:** Simply detect if there is only one face in the photo, applies to all face registration channels.
- **High** (Recommended, currently only available for face registration in web GUI): Multi-factors such as image size, effective face size, angle, brightness, blurriness, mouth-openness, occlusion and other factors are taken into consideration. Higher entry thresholds help reduce misrecognition.

Detection item	Requirement
Picture format	jpg or png
Image size	<4MB
Facial number	Only one
Image size/td>	Abouve 96 px * 128 px

Effective face area	Above 100 px * 100 px
Face angle (pitch angle, deflection angle, roll angle)	Within ± 20 degrees
Luminance	Not too dark or too bright
Blur	Not too fuzzy
Face deletion	Face integrity is above 90%
Exaggeration of expression (degree of mouth opening)	The mouth doesn't open too much.
Face covering	With no covering(mask, glasses, etc) on head

3.1.2、Unqualified Examples of Photos

- Multi faces

- Face occlusion / missing

- Too small effective face area

- Too dark or too bright

- Too vague

- Exaggerated expression
